The last years events drove the Production world, Professionals and Institutions to re-think how the sustainable development of the market runs through the strategic lever of the Compliance, deepening the “hot” matters such as the Anti-Corruption, Data Protection, Safety, Security, Corporate Crime Responsibility, Quality, Sustainable Development, Energy and Environment.

The Country's development necessarily goes through the self-protection models that public and private organizations have to identify and implement, in accordance with the RULES, both legislative and normative, allowing the sustainable development internationally propounded by the International Organization for Standardization (ISO) through the publication of the ISO 37001 standard “Anti-Bribery Management Systems” on October 16th 2016.

We will discuss the above matters with the “fathers” of ISO 37001 Standard and with the Head of Central Anti-Corruption Bureau, as well as with some representatives of the main public and private stakeholders.

■
